

Yohanita Ayuning Budi, daughter of dr. Yunarti and dr. Nanang HP (Indonesia)

My daughter was detected to have a hearing problem when she was 2 years old. I was upset and downhearted at first realizing the fact that my daughter had a hearing problem. However, I realized later that if I kept dwelling in sadness, what will happen to my daughter's future?

I then ran various tests at PT ABDI Jakarta. I decided that my daughter needs a hearing aid. It has been a behind the ear (BTE) type of the model Phonak Maxx 311 Forte. What she has been using by now for more than 2 years.

The result was great; of course it needs to be followed by an AVT (Auditory Verbal Therapy). It's even better after supplemented by FM system equipment during the last 6 months, my daughter is able to attend a common school, TK Bernardus, Semarang, which is considered to be one of the superior/favorite school in Semarang. What's made me even more carried away was when I heard my daughter said, "Thank you God, Nita can hear now!"

I thank PT ABDI for providing such great post-sales services. I would like to send messages to all parents whose children have hearing problem. The future of our children is in our hands as the parents. I hope PT ABDI can help all people with hearing problem, especially to children with hearing problem like my daughter's.
